Summary for the "Technical Writer Document Preparation Tools" Briefing

Documents written by the divisions technical writer are currently developed using Framemaker and Webworks. The cost per seat for this set of products is about or over $1000, and at the moment we have own licences for one seat only. Clearly this is not scalable as the number of documents and need for multiple authors for the documents in question (e.g.CRL, Strong Authentication, Enstore). We propose to purchase two more seats to enable other authors of these documents. We are also looking for alternate technologies and invite input from members of the division.
